

▼ Description

Preconditions:

1. The user is successfully logged in as MDM:

Login:

Password:

2. The order was created by HR using the POST request: `url/orders`

Steps to reproduce:

1. Send the request using the **GET** method: `url/orders/filter` by adding Query Params:

KEY: page VALUE: number (for example: 1)

KEY: size VALUE: number (for example: 2)

KEY: status VALUE: **PENDING_APPROVAL**

2. Get order id from the response of Step 1

Send the request with the body below using the **PUT** method: `url/orders/status` by changing the data:

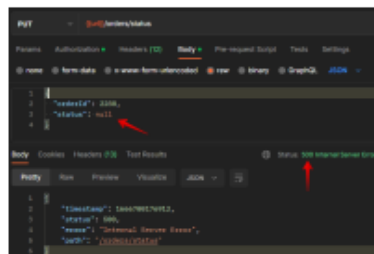

Replace the value of the **"orderId"** field in the request body below with the id from the response body of Step 1

Replace the value of the **"status"** field in the request body below with the value: **null**

```
{
  "orderId": 123,
  "status": "APPROVED"
}
```

Actual result:

Status code: **500 Internal Server Error**

Expected result:

Status code: **400 Bad Request**

Preconditions:

1. The user is successfully logged in as HR:
Login:
Password:
2. The item was created by MDM using the **POST** request: `url/catalog/merch`
3. The order was created by HR using the **POST** request: `url/orders`
4. Get order id from the response on **POST** request

Steps to reproduce:

Send a request with the body below using the **PUT** method: `url/orders` by changing the `orderId`:

Add Query Param: `orderId` (take the order id from the step 4 of Preconditions)

```
{
  "orderItemCreationDtoList": [
    {
      "merchItem": {
        "properties": {
          "size": "XL",
          "color": "Red",
          "material": "65% cotton, 35% PY"
        },
        "merchName": "Backpack"
      },
      "quantity": 20,
      "comment": "Cool order item",
      "attachedFile": "m6Lp"
    }
  ],
  "responsible": {
    "id": 1001,
    "name": "string",
    "surname": "string"
  },
  "supplyDate": "1969-01-25T07:10:00.629Z",
  "attachedFile": "m6Lp",
  "comment": "Cool order",
  "orderId": "1001"
}
```

Actual result:

Status code: **200 OK**

Expected result:

Status code: **400 Bad Request**

▼ Description

Preconditions:

1. The user is successfully logged in as HR:
Login:
Password:
2. The item was created by MDM using the **POST** request: `url/catalog/merch`
3. The order was created by HR using the **POST** request: `url/orders`
4. Get order id from the response on **POST** request

Steps to reproduce:

Send a request with the body below using the **PUT** method: `url/orders` by changing the `orderId`:

Add Query Param: `orderId` (take the order id from the step 4 of Preconditions)

```
{
  "orderItemCreationDtoList": [
    {
      "merchItem": {
        "properties": {
          "size": "XL",
          "color": "Red",
